Gene Synthesis Terms and Conditions

- General.** All pricing information conveyed by IDT applies to the exact sequences as ordered. IDT reserves the right to change the price of a sequence altered after ordering by the customer, or if by nature the gene requires additional handling in the form of; specialized growth conditions, vector sub-cloning, special bacterial cell lines, or unique formulations to reagents necessary for bacterial propagation. If IDT is unable to successfully assemble a gene as ordered the customer may be offered the gene as a “best effort”, with a reduced fee, determined at IDT’s discretion. IDT reserves the right to cancel a gene order at anytime. All changes to price, vector choice, and cancelation will be communicated to the customer.
- Disclaimer on Vector Delivery and Custom Vectors.** IDT cannot guarantee delivery in the customer's preferred vector, including “custom” vectors. Any gene that cannot be cloned into the preferred vector will be provided in an alternate vector of IDT's selection or as linearized DNA, and any associated sub-cloning fee or vector fee would be removed.
- QC Sequencing.** IDT cannot guarantee delivery in the customer's preferred vector, including “custom” vectors. Any gene that cannot be cloned into the preferred vector will be provided in an alternate vector of IDT's selection or as linearized DNA, and any associated sub-cloning fee or vector fee would be removed.
- Yield.** Delivered yield is approximate.
- Turnaround Time.** All turn-around time (TAT) statements are estimations of expected turn-time, and are not binding on IDT. Turn-around estimates are for information purposes only and delays of any kind shall not relieve the customer of obligations to pay the full invoiced price
